

# Report on LABOUR MIGRATION STATISTICS

in AFRICA in 2015

## REPORT ON LABOUR MIGRATION STATISTICS IN AFRICA IN 2015

March 2017 African Union Commission (AUC) Addis Ababa, Ethiopia

### Foreword to the first edition of labour migration statistics report in Africa

I am delighted to present the First Edition of the Labour Migration Statics Report in Africa, which is a landmark in the endeavor of African leaders to make labour migration governance a crucial vector for development in the continent.

One of the recurring concerns throughout the continent is the scarcity of disaggregated data on characteristics and conditions of labour migrants. This subsequently translates into the inability to obtain valid and reliable data describing labour migration and its outcomes, such as stock and net flow data, longitudinal surveys, assessments of impact on destination and origin countries, and intra-regional remittances and their usage.

This 2016 edition contains up-to-date and relatively comparable statistics on labour migration. It is a concrete deliverable of the objectives of the AU-ILO-IOM-ECA Joint Labour Migration Programme for Development and Regional Integration, more known as the JLMP, which builds the capacity at both national and sub-regional levels to implement labour migration programmes through accurate and reliable data on Africa. The goal is to 'obtain gender and age disaggregated data on labour migration and migrant workers, including economic activity, employment, working conditions, skills and educational characteristics, social protection, social security coverage, as well as on country of origin, migration status, family status, and earnings'. We are confidently moving towards fully achieving this goal by 2019.

I commend the process undertaken with the first report which allowed National Statistics Offices of about 37 Member States to engage in a cross-learning experience where they steadily worked towards a common understanding of the concepts, definitions and methodology applied to labour migration statistics. Indeed, this is an important step which will progressively lead to effective harmonization and comparability of labour migration statistics of the African continent over the next editions. The process also unveiled the real technical obstacles impeding data accuracy and comparability across regions, sub regions and countries.

The report will contribute towards enhancing the capacities of policy makers at national and regional level, through an evidence-based approach. The Regional Economic Communities (RECs) will have an initial basis for developing labour migration databases, building on data systems of their Member States.

I wish to thank all the Member States who have made this production possible by providing the necessary material and information through their national data, with a commendable attempt to follow international statistical standards in compiling and reporting data. By showing ownership of the whole production process, they guaranteed the reliability of the report to the extent possible given the existing challenges on the continent with data collection.

I would also like to express full gratitude to the International Labour Organisation (ILO) - Regional Office for Africa for the invaluable assistance on this project. This report would not have been possible without its collaboration. The report also benefited from the comments and contributions of the International Organization for Migration (IOM), United Nations Economic Commission for African (ECA), United Nations Development Programme (UNDP), and the support of European Union (EU) and USAID all of whom I also sincerely thank.

I encourage all Member States to engage their National Statistics Offices and other entities producing labour migration data in the production of the future editions of the labour Migration Statistics Report.

It is my hope that all stakeholders at all levels will find this publication useful. I am confident that the second edition in 2017 will bring us closer to a well-established and recognised publication.

Neruma

#### **ACKNOWLEDGMENT**

This report is a joint product of the African Union Commission (AUC), the International Labour Organization (ILO), the International Organization for Migration (IOM) and the United Nations Economic Commission for Africa (ECA).

The report was prepared by a core team which was led by Imani Younoussa, Head, Statistics Division, Economic Affairs Department, AUC; Oumar Diop, Department of Social Affairs, AUC; and Yacouba Diallo, Senior Statistician, Regional Office for Africa, ILO. The technical team also included, Samson Nougbodohoue, Philip Bob Jusu, Peter Mudungwe, Theresa Watwii Ndavi (AUC), Honoré Djerma, Coffi Agossou, Hakki Ozel, Aly Cissé, Mariette Sabatier (ILO), Naomi Shirefaw, Sophia Aytenew (IOM), Joseph Tinfissi Ilboudo, William Muhwava and Gideon Rutaremwa (ECA). The team also benefitted from the technical contributions of the following consultants: Dorcas Nabukwasi, Nadia Touihri, Hippolyte Togonou, Pierre N'guessan Dje, Doumbia Saliha, and Firmin Vlavonou.

The work was carried out under the supervision of René N'Guettia Kouassi, Director, Economic Affairs Department, AUC; Dr. Olawale.I. Maiyegun, Director, Social Affairs, AUC; Cynthia Samuel-Olonjuwon, Deputy Director, Regional Office for Africa, ILO. Guidance to the team was provided by Anthony Mothae Maruping, Commissioner for Economic Affairs, AUC; Mustapha Sidiki Kaloko, Commissioner for Social Affairs AUC; and Mr Aeneas Chuma Chapinga, Director, Regional Office for Africa (ILO).

The team undertook wide-ranging consultations with stakeholders and African experts for this report, from conceptualization to the final draft. These consultations included a meeting with Regional Economic Communities (RECs) in Abidjan from 28-29 August 2015 to present a status-update to RECs on JLMP activities (Joint Labour Migration Programme) and identify possible areas of support from RECs to National Statistics Offices (NSOs) in the areas of labour migration statistics. The meeting brought together the AUC, ILO and the following RECs: The Community of Sahel-Saharan States (CEN-SAD), East African Community (EAC), Economic Community of West African States (ECOWAS), Economic Community of Central African States (ECCAS), Intergovernmental Authority on Development (IGAD) and Southern African Development Community (SADC). Representatives from the following organisation were present: United Nations Economic Commission for Africa (ECA) and AFRISTAT.

The Abidjan consultation was followed by an expert group meeting to validate the data provided by the countries held from 29 September – 1 October 2015 in Addis Ababa, Ethiopia in which the following participants took part: Nascimento Sandra Mara (Angola), Gisele Houessou Assaba (Benin), Tebogo Laletsang (Botswana), Sawadogo Soumaïla (Burkina Faso), Placide Nibogora (Burundi), Félicien Fomekong (Cameroon), Lawe Ngaïndandji Prosper (Chad), Massoundi Miradji (Comoros), Frédéric Poumbou (Congo), Blaise Mwemba Mutonji (Dem. Rep. Of Congo), Akoisso Doria Deza (Cote D'ivoire), Mostafa Younes Yousef

Younes (Egypt), , Wally H. Ndow (Gambia, The), Ossei Emmanuel George (Ghana), Sayon Oulaye (Guinea), Toumane Luntam Graça Baldé (Guinea Bissau), Okelo Caleb Oyuke (Kenya), Makeoane-Phakisi Maneo Lefulesele Anthonia (Lesotho), Daniel F. Kingsley (Liberia), Ali Said (Libya), Chakanza Charles Patrick (Malawi), Daouda Dit Aba Fane (Mali), Marie Desiree Cyndy Martial (Mauritus), Jonas Gonçalves Nassabe (Mozambique), Elina Sheehama (Namibia), Sani Oumarou (Niger), Vincent Ifeanyichukwu Oriokpa (Nigeria), Neto Da Silva Borges Ketty-Keila (Sao Tome and Principe), Abdoulaye Mamadou Tall (Senegal), Burny Loany Georges Payet (Seychelles), Sallieu Mansaray (Sierra Leone), Mohamed Hussein Abdullahi (Somaila), Manamela Mmatsholang Desiree (South Africa), Mark Odwari (South Sudan), Somaia Ahmed Hemaidan Idris (Sudan), Hashim Njowele (Tanzania), Fankeba Souradji (Togo), Wilson Nyegenye (Uganda), Harriet Namukoko Zimbizi (Zambia), Tidings Matangira (Zimbabwe), Mohamed Mghari (Morocco), Mudubu Leon Konande (ECCAS), Mamadi Kourma (CEN-SAD) and Mohammed Elduma Abdalla (IGAD).

A second validation meeting was organised with the aim of validating the first draft of the report and was held from 30 May-2 June 2016 in Dakar, Senegal, with the support of United States Agency for International Development (USAID), in which the following participants took part: Gisele Houessou Assaba (Benin), Fomo Marie Antoinette (Cameroon), Riradjim Madnodji (Chad), , Aka Dore Desire Emanuel (Cote d'Ivoire), Mostafa Younes Yousef Younes (Egypt), Batiso Zerihun Bekele (Ethiopia), Ndow Wally Hadre (The Gambia), Ossei Emmanuel George (Ghana), Okelo Caleb Oyuke (Kenya), Ndawala Jameson Simon (Malawi), Daouda Dit Aba Fane (Mali), Karoona Devi Pothegadoo (Mauritius), Elísio Sebastião Mazive (Mozambique), Vincent Ifeanyichukwu Oriokpa (Nigeria), Sandile Elvis Simelane (South Africa), Wilson Nyegenye (Uganda), Tidings Matangira (Zimbabwe), Rwanshote Joseph (IGAD).

The report benefited from administrative support from Sewnet Mulushoa and Noupeu Nji Sara Edith, AUC.

#### **EXECUTIVE SUMMARY**

- Regional integration and development are among the strong commitments renewed by Africa leaders at both regional and continental levels over the last decade, mainly through bold policy frameworks and legal instruments aiming at increasing growth and shared prosperity. commitments cover various interrelated fields such as free movement of persons and labour, increased trade and investment, infrastructure development, accelerated industrialisation. education and technical and vocational education and training (TVET), social security, etc. The AU/ILO/IOM/ECA Joint Programme on Labour Migration for Integration and Development in Africa is a comprehensive initiative articulating strategies around these interrelated fields. This initiative aims at speeding up the flows of migration and in particular labour migration, throughout the
- The data component of the Joint Labour Migration Programme (JLMP) seeks to enhance collection, exchange, and utilization of gender and age disaggregated data on migrants' economic activity, employment skills, education, working conditions and social protection. In order to achieve this and fill-in the resulting data gap, questionnaires were sent to all 54 African countries whereby focal points were to be nominated by national statistics office, in June 2015. From the 54 countries, 34 countries responded to the request for

continent.

- data on labour migration, thereby indicating a response rate of 63 percent.
- Africa's has grown from 991.2 million in 2008 to 1.2 billion in 2014 (JLMP, 2015). This represents a population growth rate of 2.6% over the reference period. The findings also show that, women outnumbered men during the reference period. This trend is also manifested across Regional Economic Communities (RECs).
- The working age population comprising of 15 years and over also continues to grow. During the 2008-2014 period under review, it grew from 581.2 million people in 2008 to 716.1 million people in 2014 (JLMP, 2015). CEN-SAD and ECOWAS recorded the largest number of persons of working age population, accounting for 313.5 million and 221.9 million persons in 2014. EAC (62.5 million) and AMU (68.2 million) reportedly had the lowest number of persons of working age population.
- The size of the labour force (employed + unemployed) in the continent ranged from 383.6 million in 2008 to 455.9 million in 2014 (JLMP, 2015). In the same manner as the increase in general population and working age population witnessed above, the size of the labour force similarly increased over the period 2008-2014 by about 72.3 million persons. This increase is also reflected across males, 221.1 million (2008) to 255.7 million (2014) and females,

160.8 million (2008) to 200.3 million (2014). COMESA (181.6 million) and CENSAD (174.7 million) were the RECs that accounted for the largest Labour Force in 2014. AMU on the other hand accounted for the lowest labour force among the RECs with 32.6 million recorded for 2014. The decline in the size of the labour force over the reference period is also reflected through the labour force participation rate (LFPR). LFPR decreased from 66% in 2008 to 63.7% in 2014 for both sexes. It is apparent that this decline is in part precipitated by the decline in male LFPR over the period under review from 76.7% in 2008 to 71.7% in 2014.

■ International migration in Africa increased from 13.2 million migrants to 15.9 million migrants from 2008 to 2014 (JLMP, 2015).

Out of the 15.9 million migrants in 2014, there were 8.3 million migrant workers (4.7 million males and 3.6 million females) according to the regional estimates from the current study. No significant gender differentials were observed in the number of migrants. Most international migrants resided in CEN-SAD and ECOWAS comprising 7.6 million and 7.1 million migrants respectively. The RECs hosting the least international migrants were AMU (1.1 million) and ECCAS (1.6 million) migrants. CEN-SAD and ECOWAS registered the highest international migration rates of 2.2% and 2.1% respectively.

■ International migrants were found to be relatively more economically active compared to the general population.

## CONTEXT OF LABOUR MIGRATION IN AFRICA

#### 1. Political context

At continental level, the African Union has elaborated a comprehensive set of migration policy commitments and recommendations, since the Abuja Treaty establishing the African Economic community (1991). Many of these largely complementary documents have been adopted at the Heads of State level. Together, they add up to a comprehensive guidance framework for national and regional labour migration policy across the continent. They include, amongst others, the 2006 AU Migration Policy Framework that devotes a main chapter to Labour Migration, the AU Plan of Action on Boosting Intra African Trade (2012) recognizing the key role of free movement of people and labour migration regulation, the Joint Africa-EU Declaration on Migration and Development, Tripoli, 22-23 November 2006. The Continental Free Trade Area (CFTA) and Boosting Intra-Africa Trade (BIAT) contribute to integration as well.

In July 2015, the AU Assembly adopted the following landmark declaration on migration, "Reaffirm our previous commitments aimed at accelerating mobility and integration on the continent, migration in development while addressing regular and irregular migration". The Heads of States and Government therefore

committed to: (i) Speed up the implementation of continent-wide visa free regimes including issuance of visas at ports of entry for Africans; (ii) Offer all Africans the same opportunities accorded to the citizens of countries within our respective Regional Economic Communities (RECs) by 2018; (iii) Expedite the operationalization of the African Passport; (iv) Establish a harmonized mechanism to ensure that higher education in Africa is compatible, comparable, with acceptability and enable recognition of credentials that will facilitate transferability of knowledge, skills and expertise. At their request, the AUC is developing a Protocol on Mobility and Free Movement of people in Africa.

At regional level, the Regional Economic Communities have put in place policies and/ or legal instruments aiming at facilitating free movement of people and promoting labour migration including provisions on skills portability and social security benefits portability as well.

These instruments are intended to increase the labour migration flows within the continent.

### 2. Demographic context

Africa is recognized as one of the most demographically dynamic continents. With a population of over one billion with a young majority, Africa must absolutely use this labour-intensity to accelerate its development. It is noted that the quality of certain labour intensive jobs differs greatly from country to country. Labour mobility in its totality within Africa has positioned itself as one of the reliable solutions to this problem. A well-planned labour mobility strategy between African countries could be an effective way to address the high costs incurred by importing labour from countries mainly from Europe, Asia and America.

The development of a database on labour migration statistics in Africa should provide a timely response to the economic, demographic and social factors affecting labour migration in Africa. The database which is the result of this study will also provide an appropriate response to international calls for multiple data collection and quantitative analysis in this area. The JLMP data collected fills in an important knowledge gap for policy makers, businesses, employers, employees and the research community.

#### Overview of Joint Labour Migration Programme (JLMP)

For over a decade, the AUC has been engaged in providing policy guidance on Migration and working closely with its Member States to address critical migration issues. The various AU policy frameworks and instruments on the issue contain recommendations on how to promote the benefits of migration, improve capacity for migration management and enhance mobility on the continent as well as address the challenges of irregular migration.

The Heads of State and Government of Africa at their 24<sup>th</sup> Ordinary Session of the AU Assembly in January 2015, adopted the AUC/ILO/IOM/ECA Labour Migration Governance for Development and Integration Regional Programme in Africa, known as the Joint Labour Migration Programme (JLMP). It was developed on the basis of the Migration Policy Framework for Africa (Banjul 2006). It defines the strategies under Priority Area 5 of the AU Plan of Action on Employment and Poverty Alleviation (Assembly / AU / 20 (XXIV)) adopted in Addis Ababa in January 2015.

The objectives and actions in the JLMP are designed to meet the challenges of migration and labour mobility on the continent by strengthening the capacity of Member States and RECs to, among other things, achieve a greater development, adoption and implementation of harmonized systems of free movement and coherent national migration policies of the workforce in the RECs. They also aim to extend social security to migrants to access compatible portability systems, resolve "shortages" of skills

#### CHAPTER 1 CONTEXT OF LABOUR MIGRATION IN AFRICA

and inadequate teaching skills, while increasing recognition of diplomas harmonized across Africa, fair hiring practices, etc. Facilitation of mobility and the free movement regimes should provide more channels for legal migration and contribute to the reduction of irregular migration.

The AUC, ILO, IOM and UNECA implement the Joint Programme on Migration of labour (JLMP) for Africa officially adopted in January 2015 by the Heads of State and Government of Africa

as a global programme on the governance of labour migration in the region.

During the round-table on intra-regional migration and mobility of the workforce in Africa held from 23 to 25 March 2015 in Kigali, Rwanda, a roadmap for the implementation of the JLMP was adopted. The data component included in this road map occupies an important place due to the objectives assigned to it.

# OBJECTIVES AND METHODOLOGICAL APPROACH OF THE STUDY

#### 1. Objectives

The overall stated objective of the JLMP is to: strengthen the effective governance and regulation of labour migration and mobility in Africa, under the rule of law and with the involvement of key stakeholders across government, legislatures, private sector employers, workers (social partners), migrants, international organizations, NGOs and civil society organizations.

The broad objective of the report is to compile data on labour migration and support Member States in better understanding the data for the purpose of policy formulation. This work will support the successful implementation of the 2030 Agenda for Sustainable Development, which includes a target on the protection of migrant workers under the goal of promoting decent work and economic growth. Africa has embraced both global and continent-wide development frameworks which recognize the vital role of migration in Africa's transformation.

The report addresses the specific objectives of the data component of the JLMP. These objectives include:

- I. To compile information on the stocks and flows of international migrants;
- II. To assess the quality of labour migration data;
- III. To build Member States capacity in the collection, compilation and management of labour migration statistics;
- IV. To serve as a reference for future data collection efforts in Africa and beyond; and
- V. To publish the data on the ILO Labour Migration database, ILOSTAT.

## 2. Methodological approach of study

This report is the result of several steps that constitute the methodological approach used for its production.

#### 2.1 Development of the questionnaire

The AUC adapted an ILO questionnaire, the international labour migration questionnaire (ILMQ) that best fit the African situation, to collect data on labour migration in Africa. The questionnaire had already been utilised in the implementation of a similar project in Asia for the ASEAN countries. The questionnaire includes the following stock indicators on International labour migration: total population, labour force, total employees, total labour migrant population, total number of international employed migrants, working age population, educational level (ISCED 2011), the country of origin, industry (ISIC Rev. 4), occupation (ISCO-08), status in employment (ICSE-93), average monthly wages (mean and median). The international labour migration flow indicators covered include: the country of origin, educational attainment (ISCED 2011), industry (ISIC Rev. 4), occupation (ISCO-08) and number of nationals abroad.

#### 2.2 Designation of focal points

The AUC officially contacted all Member States to identify focal points for labour migration statistics. The questionnaires were sent out in June 2015 to the 54 African countries for data and metadata collection on labour migration

statistics in Africa. The focal points were either officials of national statistics offices (NSOs) or national structures in charge of migration issues. It was noted that some of the nominated focal points are in charge of other areas that differ from migration. Moreover in some national statistics offices, there is no staff specialized in the migration domain. Once the names of the nominated focal points were received, the AUC emailed the ILMQ to them. The questionnaires also included various instructions for consistency in completion. These questionnaires included different key definitions and concepts, and were in the two main languages of the AUC: English and French.

#### 2.3 Support of external consultants

Furthermore, consultants were recruited by AUC to compile the report on labour migration statistics in Africa using 2008-2014 as the reference period. It is worth noting that the 2010 round of population and housing census collected data for the period 2005-2014 in Africa. Following the submission of data by countries, a data validation workshop was organised by AUC in Addis Ababa in October 2015 that brought together the focal points of the Member States. A number of shortcomings on data sources, concepts and definitions, and on the questionnaire were tabled for clarification by the consultants during the workshop and Member States were urged to clarify and provide missing data where possible. Consistency checks were also conducted on data provided by the countries so as to verify totals that did not tally, conflicting classifications and sources. Following this workshop, the consultants compiled, analysed the data and later presented a draft report on Labour Migration Statistics in Africa to AUC and ILO.

## 2.4 The various technical consultation and validation meetings

There were four pivotal meetings and consultations held in total before arriving at the final version of this report.

- The first meeting was held in Abidjan in August 2015 with RECs with the aim of identifying and agreeing on their roles and responsibilities. The RECs identified the different ways in which they can assist their partner countries in collecting data on labour migration.
- Thereafter, the second meeting was held in Addis Ababa from 30 September to 02 October 2015. It enabled focal points to present all the difficulties they faced while collecting labour migration data. The consultants and focal points who were present shared their experiences in order

to enable better data collection on labour migration.

- The third meeting was held in Dakar from 30<sup>th</sup> May to 1<sup>st</sup> June 2016. This was an opportunity to present the first draft of the report. It brought together the focal points, RECs and other partners (USAID, IOM and ILO). Comments were made on the report for the purpose of improving it. It was decided that a smaller group of experts be formed to undertake the finalization of the report taking into account all the recommendations from the Dakar meeting.
- The last meeting was held in Addis Ababa, Ethiopia, in September 2016 as a result of the immediate past meeting and brought together experts to finalize the report. The experts spent two days reviewing and revising the document bearing in mind that they had previously worked on the document before the meeting.

# PRESENTATION, STRUCTURE AND LIMITATIONS OF THE RFPORT

## 1. Presentation of the report

This report provides an extensive analysis of current and emerging trends on international labour migration in Africa. The conclusions which are mainly quantitative call for a global approach towards the review of available secondary data sources and estimates and, for the first time, the data and metadata collected at national level. The report advocates for a better understanding of the importance of having reliable systems for data collection on labour migration in Africa.

It also provides a single point of reference for quantitative data and statistics on labour migration in Africa and presents a critical review of existing national sources according to their gaps and inconsistencies analysed here. Furthermore it highlights the many benefits of gathering accurate and reliable data and analysis based on facts, suggesting ways that can improve and harmonize processes consistently for the future.

#### 2. Report Structure

The first chapter highlights information on the context of the study and includes political and demographic aspects as agreed upon.

The second chapter presents the different objectives of the report. It also presents the methodology followed to achieve its production. All the procedures used to obtain the final version of the report have been clearly elaborated in this section.

Chapter 3 presents the report detailing its structure. This chapter also highlights the limitations of the report.

Chapter 4 presents the concepts and definitions used to collect and validate data for this report. The concepts and definitions in this report are in line with international standards in this area.

Chapter 5 is devoted to assessing and evaluating the quality of data for which the study focuses on. It presents the techniques used for this evaluation as well as the shortcomings found during the assessment.

Chapter 6 presents the demographic profile of the African continent by providing information on the population of Africa, disaggregated by sex. It analyses the labour force on the mainland while describing its geographical distribution.

Within the seventh chapter, important information on international migrants is provided based on the analysis of the data collected. It is one of the essential chapters of the report as it takes into account many of the objectives to be achieved by the report.

The final chapter showcases the conclusions and recommendations from the research. This section provides guidance on the collection of data, to all stakeholders of the project and African decision-makers. This is a series of policy recommendations highlighting a number of ways in which Member States can improve, expand and better harmonize the collection of data for policy making, based on facts.

Following the main body of the report is a statistical appendix containing some additional tables and figures organised by country, regional economic communities and theme.

## 3. Limitations of the report

Labour migration data are not readily available from African countries for most of the indicators in the Joint Labour Migration Programme (JLMP) for Africa. Comparative analysis by RECs and Africa as a whole, was constrained by differences in geographical coverage, use of data from different reference periods, incomplete data series, reliability of sources of data on migration, use of concepts and definitions, as well the mix-up of different versions of ISCED, ISIC and ISCO classifications. The quality of the regional and sub-regional estimates presented in this report is affected by the degree of comparability of the benchmark statistics across countries.

The use of administrative records such as employment contract documents and immigration records by countries could result in concurrent omissions and double counting of multiple entry migrants, over a certain reference period. Porous borders between most countries could also lead to underreporting of volume of migrant flows as, many people, particularly those living along borders may not use official border crossing points where they could be accounted for as migrants.

Inconsistencies with data totals as well as the use of different definitions and classifications for the same reference period hinder further analysis of the international labour migration indicators.

## CONCEPTS, DEFINITIONS OF THE STUDY

This chapter presents briefly the concepts, definitions used to collect and validate data for this report. It also describes some constraints and limitations related to this exercise.

The concepts, definitions and classifications to guide data collection were stipulated in the ILMQ. The focal persons were required to use the latest recommended concepts, definitions and classifications but it appears that data available for certain international labour migration indicators were produced using older versions. As such, they were thus urged to specify the meta-data of reported data which includes their data sources, reference period, etc. It is hoped that, the meta-data would foster better understanding of the context of methodology, concepts, sources, reference periods etc. used during the collection and analysis of the data.

Below are concepts and definitions for International Labour Migration Statistics:

#### **TOTAL POPULATION**

The 'total population' (or 'resident population') comprises persons of all ages who were usual residents living in the country during the reference period, regardless of their legal residency status or citizenship.

#### MIGRANT POPULATION

The United Nations Statistics Division's most recent guidelines define an 'international migrant' as any individual who changes his or her country of usual residence. A person's country of usual residence is that in which the person lives, that is to say, the country in which the person has a place to live where he or she normally spends the daily period of rest. Temporary travel abroad for purposes of recreation, holiday, business, medical treatment or religious pilgrimage does not entail a change in the country of usual residence. The 'migrant population' thus comprises all 'international migrants' living in the country during the reference period.

#### YOUTH

Youth refers to individuals aged between 15 and 35 years (inclusive) within a given population. This is the age group recommended by the AU. In the next round of the report on labour migration statistics in Africa, youth statistics will be collected for different age groups (15-24; 15-29 and 15-35) in order to allow for international comparison.

#### **WORKING AGE**

The working age population refers to those aged 15 years and above.

#### LABOUR FORCE

The 'labour force' comprises all persons who are of working age (i.e. aged 15 or above) and are either 'employed' or 'unemployed' (i.e. seeking employment) during the reference period, according to national conventions.

#### **EMPLOYED**

The 'employed' comprise all persons of working age who, during a specified brief period (such as one week or one day), were in the following categories: a) paid employment (whether at work or with a job but not at work); or b) self-employment (whether at work or with an enterprise but not at work). Those 'employed' are classified according to national convention. They should include all of those who are resident within the country and exercise an economic activity for a certain period of time, regardless of legal residency status or citizenship.

#### MIGRANT WORKER

The term "migrant worker" includes unemployed migrant workers as well as migrant workers whose status in employment is employer or own-account worker or contributing family worker. It refers to all international migrants who are currently employed or are unemployed and seeking employment in their present country of residence.

#### FLOW<sup>1</sup>

Refers to the gross number of persons moving to or from a country, during the reference period.

#### **MEAN MONTHLY WAGE**

Refers to the gross mean average monthly wage received by all employees for all jobs in nominal terms. It is calculated by dividing the wage bill for all employees (i.e. the sum of all employees' earnings) by the total number of employees (which is the absolute number of employees, as opposed to the number of full-time equivalent employees). In the event that monthly wages are unavailable, variations of wages (i.e. hourly, weekly or annual) will be accepted, though a note should be included.

#### LABOUR FORCE PARTICIPATION RATE

The Labour force participation rate is the number of persons in the labour force given as a percentage of the working-age population 15 years and above.

#### STOCK

Refers to an aggregate number of persons residing in a country, during the reference period. For the 'immigrant stock', it is equal to the total 'migrant population' (as above); for the 'emigrant stock', it is equal to the total number of a country's citizens who do not reside in that country.

Part of the challenge in analysing migration flows is that there is no global consensus on who is a migrant worker. At the 19th International Conference of Labour Statisticians (2013), a resolution was adopted recommending that the ILO "(a) set up a working group with the aim of sharing good practices, discussing and developing a work plan for defining international standards on labour migration statistics that can inform labour market and migration policy, (b) prepare a progress report for discussion to the next ICLS" (ILO, 2013. Report of the Conference, p. 68, Resolution IV).

#### **CHAPTER 4** CONCEPTS, DEFINITIONS OF THE STUDY

#### **SEX RATIO**

The sex ratio is the ratio of males per 100 females in a population.

#### REFERENCE PERIOD

Countries were requested to provide data for a ten-year time period starting from 2005 to 2014, this corresponds to the 2010 round of census of population and housing in Africa. However, as mentioned above, most countries could not provide data on all international labour migration indicators for the whole series. The relatively few countries that complied apparently used projections (factoring mostly population and housing census data). In general, the use of different sources with at some instances different reference periods complicates the analysis and comparison of the international labour migration indicators. This is one of reasons for aggregating the data presented in the findings of this report to RECs and the continental levels respectively.

## ASSESSMENT OF DATA QUALITY

The task following data collection was focused on data quality assessment, analysis, preparation of report of findings with recommendations. The data evaluation was geared towards enhancing comparability of data submitted by countries. The assessment of data quality has a number of dimensions. In this report, it basically involved the verification of data sources, response rates, reference periods, appropriate use of recommended definitions and classifications, and consistency of data within tables as well as comparing data between tables. Below are brief notes about observations that were made on the above mentioned data quality issues.

#### 1. Data sources

In general, data provided by countries were mainly from Population and Housing Censuses. Demographic projections and Labour Force Surveys were also used as sources of data on international labour migration statistics. Other sources of data included other household-based surveys such as Integrated or Living Standards surveys. It is however noted with concern that, hardly any country provided data from migration surveys.

Data was also obtained from administrative records such as employment contract documents, and Immigration records by relatively few countries. The general lack of data and analysis on labour migration in Population and Housing Census Reports on Migration, Migration surveys, and surveys with migration modules restricted further analysis of Labour Migration indicators. It should be noted that one of the best sources for

capturing migrant flows is administrative records such as Immigration documents or forms completed at border crossings. However, in many instances countries partially analysed such sources, mainly for Tourism indicators such as, tourist arrivals counts without further screening of potential migrants.

#### 2. Response Rate

The extent to which a target population and unit of enumeration of a study responds to questionnaires and questions in a questionnaire, sometimes called the response rate, is also indicative of the quality of the data collected. Of the 54 African Union Countries, 34 provided data and thus giving an overall country response rate of 63 percent. Moreover, among the countries that provided data, the majority partially completed the ILMQ sent by AUC. The partial completion of the questionnaire could be attributed to non-availability and lack of further analysis of international labour migration indicators from widely used data sources such as Population and Housing Censuses, Demographic projections and Household based surveys such as labour force surveys. This apparent inadequate completion of the questionnaires made it difficult to compile and produce international labour migration statistics in general and in flows in particular. Despite these limitations, some estimates of international migration stocks and flows for the RECs and the continent were produced. However, due to country overlaps in certain RECs the totals for RECs do not necessary add up to totals for Africa.

## 3. Data Consistency

The data was checked for inconsistencies and efforts were made to resolve them. Consistencies were checked within tables and between tables. Moreover, inconsistency of totals not tallying and the use of different definitions and classifications for the same reference period as well as different versions of definitions and classification for the same and different reference period within and between tables were noted. Inconsistency issues were verified with country focal persons and resolved.

## 4. Results on quality of data

The tables provided include several modules that are grouped as follows: stocks and flows. The modules on stocks were filled in, however not all information and data was collected. With the flow data, there was a very low response rate. Focal points mostly mentioned the unavailability of this data in their countries. Nigeria is the only country that filled in the tables on flow of migrants. The difficulty of collecting these types of data is that despite this being possible through regular monitoring, it is not done. The focal points indicated that the administrative structures that can capture the inflows and outflows of people through their daily activities, do not have full knowledge of the importance of collecting this data. This implies that they are not true data sources.

The inconsistencies that were discovered were corrected with the help of focal points and many other data sources. Exchanges between focal points and consultants under the supervision of the ILO and the AUC allowed for this clarification of inconsistencies.

# DEMOGRAPHIC PROFILE OF AFRICA

The findings of this report set a baseline for the statistics reported on Africa and address the perennial lack of data at the national, regional and continental levels respectively. This endeavour also sets the stage for a more harmonised, systematic, and periodic data collection, analysis, management and publication of international labour migration data at all three levels.

1. Population size and Distribution

In order to formulate present and future development programmes, nations and regions need to know the size, characteristics and growth patterns of their populations. To ensure sustainable development, the pace of population growth of countries and regions should therefore be in tandem with the rate of their economic growth and development. This section presents the size of the population of Africa and its distribution among the member states and Regional Economic Communities for the period 2008-2014.

The population of Africa is estimated to have increased from about 991 million in 2008 to nearly 1.2 billion in 2014, an increase of about 17% (167.2 million) within the six-year period. Figure 1 shows the disaggregation by sex of the African population for the reference period. The female population outnumbered the male population throughout the period

under review. The male population increased from 491.1 million people in 2008 to about 574.8 million in 2014 an increase of about 82.6 million people, while the increase in the female population during the same period was nearly 83.6 million people (500.0 million in 2008 to 583.6 million in 2014), (see Tables A1-A3 in Annex).

There are eight (8) regional economic communities in Africa:

- AMU: 5 countries
- **CEN-SAD: 29 countries**
- **COMESA: 19 countries**
- **EAC:** 6 countries
- **ECCAS: 10 countries**
- **ECOWAS:** 15 countries
- IGAD: 8 countries
- SADC: 15 countries

In 2014, the biggest regional community was CEN-SAD with a share of about two fifths of the total population of Africa. Other major regional communities, all with shares of the population above 20% included COMESA 440.9 million (38%), ECOWAS 340.6 million (29%), SADC 328.1 million (28%) and IGAD 232.5 million (20%). The results also indicate

Figure 1: Population of Africa by sex, 2008-2014

the total population for both sexes.

the total population for both sexes.

Source: JLMP data 2015

Figure 2: Population of Africa by REC and sex, 2014

that the shares of the populations of the RECs in the African population did not change significantly over the period 2008-2014.

The country specific population figures indicate that Nigeria had the largest share of the population in Africa, increasing from about 149.7 million in 2008 to 181.4 million in 2014. Proportionately, the share of Nigeria's population in Africa increased from 15.1% to 15.7%. The Seychelles had the lowest share of the population, constituting less than one percent (0.01%). However, in terms of absolute size, the population increased from about 87,000 people in 2008 to about 100,000 people in 2014 (see Tables A1 – A3 in the Annex).

## 2. Working Age Population

The working age population is the total number of potential workers within an economy. There is no universal working age population therefore international guidelines recommend that countries should specify country specific age limits for the measurement of the working age population. For purposes of comparability across member states and RECs, the AUC adopted the age group 15 years and above as the working age population and this is the basis on which the labour market indicators in this report are based. It also is the same age group that is commonly used by ILO.

Figures 3 below shows an increase in the working age population in the Africa from about 581.2 million people in 2008 to nearly 716.1 million persons in 2014, an increase of about 134.8 million persons in a period of 6 years depicting a relatively high population growth rate. The male working age population 15+ increased from 288.3 million people in 2008 to

about 356.6 million in 2014, an increase of about 23.7% (68.3 million), while the corresponding increase in the female working age population 15+ was from 292.9 million people in 2008 to about 359.6 million in 2014, an increase of approximately 22.8% (66.7 million).

The Community of Sahel-Saharan States (CEN-SAD) had the largest share of the working age population 15+ in Africa, accounting for more than two fifths of the continent's total. This share of the working age population of the CEN-SAD has not changed much over the years registering on approximately 43%. The other African regional economic communities with high shares of the working age population to the overall African working age population during the reference period included COMESA 257.5 million (36.4% in 2014), ECOWAS 221.9 million (31.3% in 2014) and SADC 191.8 million (27.1%) in 2014 (see Figure 4 and Tables A16-A18 in the Annex).

Nigeria had the highest proportion (18.3%) of working age population 15 years and over, in 2014. Other countries with relatively sizeable proportion of working age population 15+ were: Egypt (8.1%), Ethiopia (7.3%), D. R. Congo (6.3%), South Africa (5.3%) and Algeria (4.0%), (see Tables A10-A15 in the Annex).

## 3. Labour Force

The labour Force is composed of persons aged 15 years and above who supply labour for the production of goods and services; it is comprised of the employed and unemployed. Figure 5 shows that the total labour force for Africa was approximately 455.9 million, with males and females constituting 255.7 million and 200.3 million, respectively in 2014. This implies that females are disadvantaged in Africa in accessing the labour market compared to their

Figure 3: Working Age Population (15+) of Africa by sex, 2008-2014

Figure 4: Working Age Population (15+) of Africa by sex, 2008-2014

**Female** 

Figure 5: Labour Force (15+) of Africa by sex, 2008-2014

Figure 6: Labour Force (15+) by sex and REC, 2014

male counterparts. This can be partly attributed to socio-cultural norms in these societies which favour males to females.

In 2014, COMESA region had the highest labour force in Africa registering 181.6 million whilst AMU (32.6 million) registered the lowest. The male and female labour force 15+ in COMESA accounted for 101.7 million and 80.1 million respectively. In the AMU region, male and female labour forces accounted for 25.1 million and 7.6 million respectively, marking a huge gender differential in labour market activity in the region (i.e. for every three males in the labour force, there is only one female in the region) (See Figure 6 and Table A22 in the Annex).

Nigeria, registered the highest labour force in Africa over the reference period 2014 at 72.9 million. Ethiopia, DR Congo, Egypt, Tanzania and South Africa recorded the next highest labour force population in Africa. In general, differentials in the size of the labour force in Africa could partly be attributed to the size of working age population, labour force participation, structure of the economy, the vibrancy of the informal sector and cultural factors (see Tables A19 – A21 in the Annex).

# 4. Labour Force Participation Rate (LFPR)

The Labour force participation rate is the number of persons in the labour force given as a percentage of the working-age population 15 years and above. Figure 5 shows that 455.9 million persons of the working age population in Africa were economically active in 2014 (labour force). This indicate a labour force participation rate of 63.7% for the continent as a whole. However, the overall figure masks significant differentials by sex, REC and country. The labour force participation rate for males and females was about (71.7%) and (55.7%) respectively, in 2014 (figure 7).

In 2014, the labour force participation rates were highest in the SADC (73.2%) and lowest in the AMU (47.9%) region. The labour force participation rate for males and females in SADC were about (76.1%) and (70.4%) respectively. In 2014, the labour force participation rate for males and female in AMU were about (73.7%) and (22.1%) respectively. It is noted that there were little gender differentials in labour force participation rates in SADC. In contrast, huge gender disparities were observed in the AMU region with females highly underrepresented in the labour force. This pattern in AMU region could partly be attributed to traditional beliefs in the exclusion of women (see Figure 8 and Table A23 - A25 in the annex).

Figure 7: Labour Force Participation Rates in Africa by sex, 2008-2014

Figure 8: Labour Force Participation Rates in Africa by sex, 2008-2014

# ANALYSIS OF DATA ON MIGRATION IN AFRICA

## 1. General Analysis of Data on Migration in Africa

## 1.1 International Migration

This section deals with international migration stocks. There are well documented factors that lead to international migration and these are broadly divided into push factors and pull factors. The key push factors include high levels of population growth rates, poor labour market indicators, relatively poor social and economic amenities, natural disasters, insecurity, among others. One of the strongest pull factors for migration is partly attributed to better economic and political prospects in countries of destination.

## 1.2 Volume of Migrants

International migrants in Africa as a whole increased from nearly 13.2 million in 2008 to about 15.9 million in 2014. In 2014, males and females amounted to 8.3 million and 7.6 million international migrants, respectively.

In 2014, the number of international migrants was highest in CEN-SAD 7.6 million (36.6% of Africa's total) and lowest in AMU region 1.1 million or 5.3% of Africa's total. Males and females in CEN-SAD accounted for (37.1%) and (36.0%) respectively. In comparison, males and

female in AMU comprise of (5.3%) and (5.1%) respectively (see Tables A33-A35 in the Annex).

Cote d'Ivoire, Nigeria and South Africa hosted most migrants, registering 2.3 million, 1.3 million and 1.2 million respectively. Other countries in Africa with sizeable migrant populations were Kenya (976,732), Burkina (786,737), Libya (772,874), Ethiopia (726,913), Tanzania (699,605), Ghana (658,068) and South Sudan (652,515), (see Tables A27 – A32 in the Annex).

## 1.3 International Migration Rate

The international migration rate is the ratio of international migrants to the general population in Africa as a whole, RECs and country as well as the ratio of migrants to the general population in Africa. This indicator portrays the potential impact of international migration on a country or REC.

The overall international migrant (Immigrant) rate for Africa was about 1.3% in 2008 compared to a rate of 1.4% in 2014. Males and females registered about 1.4% and about 1.3% international migration rates respectively in 2008. In comparison, males and females registered roughly the same proportions in 2014 (figure 11).

In 2014, EAC region registered the highest international migration rate of international migrants per population of 2.2%. ECOWAS, CENSAD and IGAD followed closely with 2.1%, 1.6% and 1.2% respectively. The region that registered

Figure 9: International migrants in Africa by sex, 2008-2014

Figure 10: International migrants in RECs by sex, 2014

Figure 11: International migration rate in Africa by sex, 2008-2014

Figure 12: International migration rate in RECs by sex, 2014

Both Sexes Male Female

\*Due to rounding, the sum of male population and female population may not match with the total population for both sexes.

the least international migration rate was COMESA with 0.7%. All RECs recorded higher international migration rates among the males except for IGAD and EAC that registered a higher female international migration rate than the males (figure 12).

In 2014, Gabon, Djibouti, Libya, Cote d'Ivoire registered the highest international migration rates in Africa in 2014 constituting 23.6%, 14.2%, 12.3% and 10.1% respectively (see Table A36 in the Annex).

## 1.4 Labour Force Participation Rates for International Migrants

The figure below shows that international migrants seem to be more economically active than the general population. On the whole, both male and female labour force participation rates for international migrants seemed also to be higher than that of their counter parts in to the general population. The labour force participation rate for both sexes across these observed countries ranged from the highest 93.3% for Mauritius to the lowest (71.7%) for Ghana (see Figure 13).

Figure 13: Labour Force Participation Rate for International migrants from some African countries by sex from different reference years

# 2. Employmentof InternationalMigrants in the RECs

## 2.1 Distribution of total migrants employed between the different RECs

The employment rate used is the proportion of employed people who are of working age (15 to 64). This rate is calculated for only two years due to lack of data. The calculation of this rate involves two variables which are the working age population and the number of international employed migrants.

Table 1: Employment rate of international migrants by REC for the years 2013 and 2014 (%)

| RECS / Years | 2013  | 2014 |
|--------------|-------|------|
| AMU          | 70.4  | 70.3 |
| CENSAD       | 50.2  | 50.1 |
| COMESA       | 62.9  | 62.9 |
| EAC          | 56.4  | 56.6 |
| ECCAS        | 43.9  | 44.8 |
| ECOWAS       | 49.2  | 49.2 |
| IGAD         | 61,.0 | 61.0 |
| SADC         | 51.9  | 52.0 |

Source: Data JLMP 2015

Table 1 above shows the employment rate in the various RECs in 2013 and 2014. At continental level, the rate is higher than 52%, but taken at REC level, significant variability is noted. While AMU, IGAD and COMESA have migrant employment rates above 60%, the rates are below 50% in ECOWAS and ECCAS communities.

The situation of the AMU may be due to the fact that countries in this region are at a more advanced level of development than several African countries. This level of development requires the type of migration to be labour migration. In essence, it is difficult for an individual to migrate to developed countries with high living standard, and live there without having a job. In these countries, sometimes, development has "swept" solidarity, so any person has to meet his/her needs from his/her own labour.

Regarding IGAD, it is worth noting the presence of Ethiopia in this region. Indeed, this country is recognized by the presence of several organizations and embassies from all parts of the world. Consequently, the majority of migrants in this "diplomatic" country are migrant workers. However, there is need to mention that the free movement of people in this community is still not a reality. This forces people to migrate to these countries for specific reasons for which the majority of them migrate for employment purposes.

ECOWAS and ECCAS have lower proportions of migrant workers. The two communities, despite recording the largest attendance of international migrants, have employment rates of migrants of below 50%.

## 2.2 The distribution of international migrants employed in the various RECs by sex

Table 2 below presents the distribution of migrants employed in the RECs for the year of 2014.

Table 2: Distribution of employed international migrants in RECs by sex in 2014

| RECS          | Migrant<br>employment<br>rate (male) | Migrant<br>employment<br>rate (female) |
|---------------|--------------------------------------|--|
| AMU           | 53.2                                 | 46.8                                   |
| CENSAD        | 56.2                                 | 44.8                                   |
| COMESA        | 53.5                                 | 46.5                                   |
| EAC           | 52.4                                 | 47.6                                   |
| ECCAS         | 59.5                                 | 40.5                                   |
| <b>ECOWAS</b> | 56.9                                 | 44.1                                   |
| IGAD          | 52.0                                 | 48.0                                   |
| SADC          | 62.2                                 | 37.8                                   |

Source: JLMP Data, 2015

In all RECs, it is evident that the rate of male migrants employed is higher than that of female migrants. This situation is more evident in some RECs than others. Male migrants have an easier time finding work. This may be due to the sectors in which migrants are fortunate enough to find the said work.

## 2.3 International migration data analysis within some RECs

This section focuses on the analysis of migration data within the Regional Economic Communities (RECs). Previous analyses have provided some overall indicators on these communities, but it is important to have an overview of the different countries within the REC. Certainly the data collected does not allow

for the different migratory movements between countries of the various RECs to be obtained, however the database allows for comparisons to be made between countries on certain principal indicators.

#### 2.3.1. ECOWAS

Figure 14 below shows the number of migrants in the 15 ECOWAS countries. ECOWAS has a total of a little over 7.1 million international migrants and the main countries with the most migrants in this area are Cote d'Ivoire and Nigeria. Both countries have more than half of the total migrant stock in ECOWAS, of up to 3.6 million migrants in 2014.

Using the international migrant stock as a comparison indicator of the importance of international migrant stocks, countries such as Cabo Verde and Guinea Bissau are those with the lowest stock of international migrants in the REC. These two countries have a total international migrant stock of 31,569, representing a 0.5% rate of international migrants in ECOWAS in 2014. But it is more interesting to consider the stock of migrants on the basis of the total population as an indicator in the analysis of the importance of migrants in the countries. This proportion makes it easier to estimate the weight of international migrants in the country as is represented for the year 2014 in figure 15.

This ratio provides insight into the weight given to international migrants in a given country as shown for the year for 2014 in figure 15 below. From Figure 15 below, it is noted that countries with a strong weight of international migrants are Cote d'Ivoire (10.1%), Gambia (6.1%) and Liberia (5.4%). Nigeria, despite having a high migrant population, has a lower percentage rate of international migrants compared to the size of its population.

Figure 14: Stock of international migrants within ECOWAS, 2013-2014

Figure 15: Share of stock of migrants in total population for ECOWAS countries in 2014 (%)

Figure 16 below shows the distribution of international migrants in ECOWAS countries by sex. It allows for comparisons between what has been observed globally and what exists in each individual country.

It is observed that international migrant population is dominated by women while other countries have a higher proportion of men among international migrants. REC reality differs from country to country. Countries such as Benin, Burkina Faso and The Gambia do not follow the RECs trend. These three countries have more women in their international migrant population. It is therefore necessary to remember that the international migration phenomenon within ECOWAS is not dependent on gender.

## Employment of international migrants within ECOWAS

This section analyses the employment characteristics of international migrants in the countries of ECOWAS. Although the REC has one of the lowest employment rates of international migrants, there is variability between these countries given their differing situations.

It is evident that for most countries with a large number of migrants are among those that experience low employment rates as is the case of Cote d'Ivoire and Nigeria. Guinea-Bissau, Ghana, Guinea and Sierra Leone are the countries with over 70% migrant workers in the workforce. On the other hand, Nigeria, Niger, Togo, Senegal and Cabo Verde have employment rates of migrants somewhat lower than that observed in the whole REC. These five countries recorded employment rates of international migrants of under 50% for 2014.

The distribution of migrant workers by sex is described in Table 3 below. From the table it is visible that among international migrant workers, a higher number of men is recorded than women without exception for all ECOWAS countries, this individual description is consistent with the findings observed in the entire region. One is tempted to say that in this region there is a link between the work of international migrants and their sex.

Figure 16: Distribution of stocks of international migrants in countries of ECOWAS by sex, 2014 (%) 80 70 60 50 40 30 20 10 0 Benin **Burkina Faso** Cabo Verde Cote d'Ivoire Senegal Togo Gambia Mali Niger Sierra Leone Guinea **Guinea Bisau** Liberia Nigéria Ghana Male **Female** 

Figure 17: Employment rate of international migrants in countries of ECOWAS in 2014 (%)

Table 3: Distribution of employed migrants in countries of ECOWAS by sex in 2014 (%).

|        | Benin | Burkina<br>Faso | Cabo<br>Verde | Côte<br>d'Ivoire | Gambia | Ghana | Guinea | Guinea<br>Bissau |
|--------|-------|-----------------|---------------|------------------|--------|-------|--------|------------------|
| Male   | 69.0  | 53.0            | 57.0          | 54.0             | 61.0   | 58.9  | 94.8   | 53.0             |
| Female | 31.0  | 47.0            | 43.0          | 46.0             | 39.0   | 41.1  | 5.2    | 46.0             |

|        | Liberia | Mali | Niger | Nigéria | Senegal | Sierra<br>Leone | Togo |
|--------|---------|------|-------|---------|---------|-----------------|------|
| Male   | 56.0    | 73.0 | 69.0  | 52.6    | 81.0    | 58.0            | 61.0 |
| Female | 44.0    | 27.0 | 31.0  | 47.4    | 19.0    | 42.0            | 39.0 |

### 2.3.2. ECCAS

The analysis in the previous section, which focused on the RECs altogether, revealed that ECCAS has a large number of migrants. However, it was noted that the business community had in its midst a low proportion of international migrants among its workers. It is therefore necessary to better characterise the migration in this REC to observe whether there is real variability in the country.

## Analysis of international migrant stocks within ECCAS

ECCAS has just over one million international migrants distributed among its members as is described in Figure 18. Four out of the ten countries within ECCAS stand with larger populations of international migrants. But the stock of migrants reveals very little about the importance of the migrant population to the total population. That is why in the following table (Table 4), has the weight of stocks by percentage of international migrants in the country.

The Table 4 presents data only for the year 2014 for all ECCAS countries except Equatorial Guinea owing to lack of data. Many differences are noted in the proportions of international migrants in different ECCAS countries. Gabon has the highest proportion of international migrants (23.6% in 2014). Congo Brazzaville, Chad and Sao Tome and Principe have 7.1%, 2.5% and 3.3% as a proportion of their international migrants in different populations respectively. These statistics are very important when we refer to the proportions of the African continent (1.4% according to JLMP data 2015) and the world (3.75% according to World Bank data 2015). Gabon would have been far more attractive given its economic weight in the region many years ago. The DRC (0.1%) and Angola (0.4%) have less than one percent (1%) as a proportion of international migrants in their populations. Angola, despite its economy experienced a "happy" period in recent years, it has low rates of international migrants on its territory.

Figure 18: Stock of international migrants in each country (excluding Equatorial Guinea) of ECCAS in 2013 and 2014 (thousand)

Figure 19: Employment rate of international migrants in countries of ECCAS in 2014 (%)

Table 4: Proportion of international migrant stocks in the populations of ECCAS countries in 2014 (%)

| Countries of ECCAS    | Proportion of international migrants |
|-----------------------|--------------------------------------|
| Angola                | 0.4                                  |
| Burundi               | 1.1                                  |
| Cameroon              | 1.1                                  |
| Chad                  | 2.5                                  |
| Congo Brazzaville     | 7.1                                  |
| DRC                   | 0.1                                  |
| Gabon                 | 23.6                                 |
| RCA                   | 1.8                                  |
| Sao Tome and Principe | 3.3                                  |

### Employment of international migrants of ECCAS

The employment rate of international migrants in ECCAS in 2014 is recorded as 43%. Countries like Gabon, Sao Tome and Principe and Angola have an international migrant worker rate of over 60%, while Cameroon, Chad, Congo Brazzaville have rates below 50%.

For Angola, the recent high growth rates thanks to oil may explain the high rate of migrant workers (63% in 2014). Angola launched in more than a decade, extensive projects of infrastructures. What is it that attracts people for that reason: employment? These projects allow international migrants to have work when they arrive in Angola.

The distribution of employed international migrants by sex in ECCAS is described in the table below.

Table 5: Breakdown by sex of the migrant stock in each of the ECCAS countries excluding Equatorial Guinea

|                       | Male | Female |
|-----------------------|------|--------|
| Angola                | 52.0 | 48.0   |
| Burundi               | 51.0 | 49.0   |
| Cameroon              | 62.0 | 38.0   |
| Chad                  | 59.0 | 41.0   |
| Congo Brazzaville     | 73.0 | 27.0   |
| DRC                   | 95.0 | 5.0    |
| Gabon                 | 57.0 | 43.0   |
| RCA                   | 57.0 | 43.0   |
| Sao Tome and Principe | 52.0 | 48.0   |

Source: JLMP Data, 2015

Through this table, it is observed that within ECCAS, the international migrants who are employed are mostly men. However, it is noted that those statistics of the men in the migrant population in employment differ from one country to another. While the DRC, Congo-Brazzaville and Cameroon experience proportions of male migrant workers of above 60%, other countries have just over 50% but below 60%.

#### 2.3.3. SADC

After ECOWAS and ECCAS, this section focuses on the detailed analysis by country of SADC. Within this REC there is South Africa, a country that has long been identified as the best economy of the continent on the basis of production as estimated by the Gross Domestic Product (GDP). As an economic power, in recent years including 2014 South Africa has been marred with its scandal of clashes between natives and foreigners. This reflects the importance of dealing more thoroughly with migration within countries in the SADC region. This section presents the characteristics of migrant stock and employment of international migrants in the countries in SADC.

#### International migrants stock in SADC

SADC migrants are unevenly divided into the different countries. While the stock of migrants in South Africa is almost half the stock of migrants in the SADC (1,223,570), Seychelles accounts for just over 2,000 migrants.

Table 6: Stock of international migrants in the various SADC countries in 2014

| Countries / Years | Migrant<br>population |
|-------------------|-----------------------|
| Angola            | 90 589                |
| Botswana          | 23 376                |
| DRC               | 53 299                |
| Lesotho           | 96 045                |
| Madagascar        | 35 507                |
| Malawi            | 207 130               |
| Mauritius         | 25 219                |
| Mozambique        | 95 159                |
| Namibia           | 54 378                |
| Seychelles        | 2 069                 |
| South Africa      | 1 223 570             |
| Swaziland         | 25 880                |
| Tanzania          | 699 605               |
| Zambia            | 56 643                |
| Zimbabwe          | 207 130               |

Source: JLMP Data, 2015

This stock of migrants dominated by South Africa find its justification in the economic weight of countries in the region. South Africa represents more than 60% of the economic weight of SADC according to the World Bank. Moreover, it is rare for Africa excluding the north to experience an industrial revolution. This constitutes an important pull factor for the populations of other countries of SADC and countries of other regions.

Male migrants dominate at regional level, however it is noted that the proportion of female migrants is experienced more in Tanzania, Angola, Lesotho and Mozambique according to the figure 20 below.

## Employment of international migrants in SADC

In figure 21 below, South Africa, Malawi and Zimbabwe have the lowest rates of migrant workers in SADC with just slightly over 37%. Tanzania and Mauritius are the "champions" in the employment of international migrants present in their territories, recording 73.0% and 80.4% respectively. Despite its economic importance and its diversified industrial structure in the region, South Africa shows a very small proportion of employment of its migrants.

In the figure (Figure 22) below, the international migrant workers of SADC are divided by sex. This distribution is described for all countries of the REC.

It can be observed that the number of international female migrants in employment is less than for employed international male migrants. This observation is true for all countries of SADC.

#### 2.3.4. AMU

With a population of just over 94 million, AMU has become an important issue on migration following the consequences caused by the movement known as name of "Arab Spring" and the instability prevailing in Libya. That is why this section, which analyses migration in this REC is of vital interest.

### Stock of migrants in the AMU

The table below presents the migrants present in each of the AMU countries for the year 2014. Besides Libya, the other countries in the REC have a very low population of international migrants.

Figure 20: Distribution of migrants in SADC Countries by sex in 2014 (%)

Figure 21: Employment rate of migrants in countries of SADC in 2014 (%)

Figure 22: Distribution of international employed migrants in SADC countries by sex in 2014 (%)

Figure 23: Proportion of international migrants in the total populations of the countries of AMU in 2014 (%)

Table 7: Stock of international migrants in the countries of the AMU in 2014

| AMU countries | Migrants |
|---------------|----------|
| Algeria       | 107,807  |
| Libya         | 772,874  |
| Mauritania    | 95,709   |
| Morocco       | 66,716   |
| Tunisia       | 49,544   |

In terms of proportion of the total populations of the countries in the REC, the description is shown in figure 23 below.

In this REC, in relative terms, all countries have more male than female migrants according to figure 24 below.

### Migrant employment in the AMU countries

Figure 25 shows the employment rates in the countries of the REC in 2014. All the AMU countries have employment rates of over 50%, with Mauritania recording the lowest (52%). It should be noted that Mauritania has the most important international migration ties with the countries of ECOWAS.

The data show that migration of men is higher than that of women (Figure 26).

### 2.3.5. EAC

With 6 countries, EAC was founded in 1967 before being dissolved in 1977 and recreated in July 2000 following several negotiations. This REC comprising of 6 countries with South Sudan occupies a geographic area that has long been subject to conflict. This REC cannot escape the phenomenon of migration even if today the crises seem to disappear to make way for development. In this section, data analysis focuses entirely on this vast REC of nearly 2 million km2 and a recorded population of over 160 million inhabitants in 2014.

### Stock of international migrants in EAC

Kenya, South Sudan and Rwanda have a large number of international migrants reported to their total population. Uganda, Burundi and Tanzania recorded proportions of migrants of below 2%.

The migrants from these countries remain regional with the logic that there are more migrant men than women, except South Sudan which displays 0.8 migrant men for one migrant women. This is presented in the table below. Overall it implies that it is easier for men to leave their home country to another.

Figure 24: Distribution of international migrants in countries of the AMU by sex in 2014 (%)

Figure 26: Distribution of employed international migrants from AMU by sex in 2014 (%)

### Distribution of international migrants by sex in the EAC countries

|             | Male | Female |
|-------------|------|--------|
| Burundi     | 49.0 | 51.0   |
| Kenya       | 49.2 | 50.8   |
| Rwanda      | 48.0 | 52.0   |
| South Sudan | 60.0 | 40.0   |
| Tanzania    | 48.1 | 51.9   |
| Uganda      | 41.0 | 51.0   |

Source: JLMP Data, 2015

Employment is one of the main goals that an individual searches for when leaving his country for another destination. Indeed, employment guarantees income which in turn allows the individual to meet his needs and those of his family and dependants. That is why after presenting the weight occupied by international migrants in the countries studied, it is appropriate to consider the employment rate of these international migrants.

Figure 28 below shows that in all EAC countries, the employment rate of international migrants is higher than 50%. Uganda and Tanzania are the two countries which have the highest rates of international migrants of above to 70%.

Uganda deviates from the general trend in the EAC countries. It has recorded a migrant population in jobs dominated by women (54%). The other EAC countries find themselves in the same situation as many other African countries where the number of men is higher in the international migrant population in employment.

### 2.3.6 IGAD

International migration is very frequent in this part of Africa citing many movements of population within the region and also to other regions. Eritrea was suspended from the REC in 2007, but the country still has a significant impact on the REC in terms of migration. So it is important to conduct an analysis of migration within IGAD in order to identify some key characteristics.

### Stock of international migrants in IGAD

The analysis focuses on stocks of international migrants of IGAD. The top three countries with the largest numbers of international migrants in the region for the years 2013 and 2014 are Ethiopia, Kenya and South Sudan. They, alone, account for more than 2 million migrants over the two years; while the Uganda, Somalia and Djibouti altogether accounted almost for 500 000 migrants (figure 30).

Figure 27: Proportion of international migrants to total population from different countries of the EAC in 2014 (%)

Figure 28: Employment rate of migrants in the countries of the EAC in 2014 (%)

Figure 30: Stock of migrants in the IGAD countries for the years 2013 and 2014

#### CHAPTER 7 ANALYSIS OF DATA ON MIGRATION IN AFRICA

With the weight of the different migrant stocks for 2014, the situation is different from that which was observed previously. Djibouti and South Sudan who are the countries carrying the largest proportions of migrant stocks in their populations as is shown in the table below.

Table 9: Proportion of the stock of migrants in the population for the IGAD countries in 2014 (%)

|             | Migrants to total population |
|-------------|------------------------------|
| Djibouti    | 14.2                         |
| Ethiopia    | 0.8                          |
| Kenya       | 2.2                          |
| South Sudan | 5.5                          |
| Uganda      | 0.9                          |
| Somalia     | 0.1                          |

Source: JLMP Data, 2015

In this REC, there are more countries that record more male migrants than female migrants, within the migrant population. Indeed, Uganda, Kenya and Somalia have proportions of women higher than men in the migrant populations for 2014 as is seen in figure 31.

## Employment of international migrants within IGAD

The graph below shows that employment rates in the various IGAD countries are above 50%. Ethiopia and Uganda recorded the highest employment rates of international migrants with 74% and 71% respectively. South Sudan is the country that has the lowest employment rate of international migrants of 51% (figure 32).

Figure 33 below shows the distribution of migrant workers by sex in the IGAD countries for the year 2014. With the exception of Uganda and Somalia, other countries of IGAD have a higher number of men than of women in their international migrant employed populations.

# CONCLUSIONS AND RECOMMENDATIONS

## **CONCLUSIONS**

The objective of this report was to compile data on labour migration in Africa with the view to equip AUC member states with information they need for formulation, implementation and management of their migration policies. The analysis in the report is disaggregated by sex, RECs, and country to present a picture about:

- 1. Trends in the size and distribution of the total population of Africa between 2008 and 2014:
- 2. Trends in the size and distribution of the working age population; (3) trends in the size and distribution of the labour force; (4) trends in the size and distribution of international migrants as well as their labour force participation rates and employment-to-population ratios.

The disaggregation of the data by RECs is somewhat complicated by the fact that some countries enjoy membership to more than one regional economic community, meaning that the REC totals do not necessarily make up the continental total.

Nonetheless, the results showed that:

Africa's total population grew at an average annual growth rate of 2.6% between 2008 and 2014, from about 991 million to 1.2 billion and that it is not evenly distributed across the RECs found in the continent. The CEN-SAD region commands the largest share of the population (slightly more than 40% in 2014) whilst the AMU region is home to the smallest proportion of the population (about 8% in 2014). The disaggregation of the population of Africa by sex showed that there were 98 males for every 100 females whereas disaggregation by country showed, as expected, that Nigeria accounts for the largest share of the continent's total population (181.4 million or 15.7% in 2014) and Seychelles the smallest (about 100 000 or 0.01% in 2014).

- Analysis of the working age population data showed an average annual growth rate of 2.8% in Africa's labour force, from 518 million in 2008 to 716 million in 2014. As is the case with the total population, CEN-SAD region accounts for the largest proportion of Africa's working age population (slightly more than 40 out of every 100 working age people (44%) in 2014. On the other end of the spectrum, the EAC region accounts for the smallest proportion (about 9%) in 2014.
- The data further showed that the size of the African labour force grew slightly faster than the total population between 2008 and 2014 (from about 384 million to about 456 million, marking an annual average growth rate of 2.5%). Whilst, the COMESA region accounted for the largest proportion of Africa's labour force (40.0%), labour force

participation rates were found to be highest in the SADC region.

- The extent to which working age population 15 years and over participates in the economy, seemed to be on the decline over the period 2008-2014. Rapid population growth, insecurity, decline in agriculture which could in part be associated with adverse climatic conditions could have been influential factors. In general, it is observed from the findings that males seemed more economically active than their female counterparts. SADC (73.2), IGAD (78.2%) and COMESA (70,5%) registered the highest labour force participation rates across RECs. The highest labour force participation rates for men were recorded for COMESA (80.1%), SADC (76.1) and IGAD (78.2%), whilst SADC (70.4%), ECCAS (67.6%) and EAC (65.8%) accounted for the highest LFPR for females.
- The findings show that the total number of international migrants ranged from 13.2 million in 2008 to 15.9 million migrants in 2014. The trend also reflects a steady increase in international migration across Africa over the period 2008-2014. It is also apparent that, international migration in Africa is largely intra-migratory across Africa, between and within RECS. The RECS

- that hosted most international migrants were CEN-SAD and ECOWAS accounting for 7.6 million and 7.1 million migrants respectively. The international migration rate for Africa ranged from 1.3% in 2008 to 1.4% in 2014. ECOWAS and EAC accounted for highest international migration rates of 2.2% and 2.1% in 2014. This relatively high migration to population ratio shows that countries in these regions are relatively more burdened with international migrants compared to other RECs in Africa.
- Out of the 15.9 million migrants in 2014, there were 8.3 million migrant workers (4.7 million males and 3.6 million females) according to the regional estimates from the current study.
- The findings also show that, international migrants were in general more economically active than non-international migrants. Although their contributions to country host economies are often blurred by local resentment, they are engaged in both the labour supply and demand side of the economy. They are sources of education, skills transfer and remittances among others. However, international migration might in some instances pose certain challenges to host countries, particularly with regards to illegal migration, security, etc.

# RECOMMENDATIONS

- Harmonise tools, concepts, definitions, and classifications on labour migration statistics to foster their standardization and enable comparability of data across countries and RECs in Africa. Questionnaires, sampling schemes and methodological guidelines should be developed and available to all RECs.
- Institute a regular data collection program on labour migration statistics like the MICS and DHS with the participation of African countries for a given year. This would provide time-series data with special emphasis on migration stock, flow and Sustainable Development Goals (SDGs) and Agenda 2063 indicators, disaggregated by sex, educational attainment, reason, income etc.
- Support National Statistics Offices (NSOs) in introducing labour migration modules in other existing data collection surveys and censuses to support the collection and dissemination of labour migration statistics;
- Support and encourage the production, storage and use of administrative data to compliment other sources of data on labour migration.

- Establish a coordination structure at national, RECs and continental levels respectively to oversee data collection, analysis, management, and dissemination of data on migration from various sources. Institute producers-users committees;
- Build and strengthen the human, institutional, organizational and ICT capacities of National Statistics Offices (NSOs) as well as other producers of labour and migration data and statistics. Institute regular trainings of data production and harmonized tools, modules, concepts, definitions, and classifications.
- Engage leaders and other key stakeholders in advocacy for more funding and technical assistance on the collection, analysis and dissemination of labour migration statistics all AU Member States.
- Establish a database on labour migration in Africa and contribute to international consultations on labour migration statistics.

# Annex 2: Classifications on International Labour Migration Statistics

#### INTERNATIONAL LABOUR MIGRATION CLASSIFICATIONS

#### LEVEL OF QUALIFICATION (EDUCATIONAL ATTAINMENT)

Table 2 and Table 9 of the ILMQ divide individuals into three categories of educational attainment by level of qualification - 'LOW', 'MEDIUM' and 'HIGH' - basedon the International Standard Classification of Education of 1997 (ISCED 1997) or that of 2011 (ISCED 2011). This breakdown follows previous work conducted by the OECD and other international bodies. An additional subcategory is added in order to distinguish those

with no qualifications whatsoever (i.e. those who have not even attained a primary level of education) from within the 'LOW' group. Details on all of the latest classifications are found in UNESCO (2012) 'International Standard Classification of Education ISCED 2011' [see (.pdf): <a href="www.uis.unesco.org/Education/Documents/isced-2011-en.pdf]">www.uis.unesco.org/Education/Documents/isced-2011-en.pdf]</a>.

#### Level of Qualification, based on ISCED 2011 or ISCED

| QUAL.  | ISCED<br>2011<br>LEVEL | ISCED<br>1997<br>LEVEL | DESCRIPTION (IN ISCED 2011)           |  |  |  |  |
|--------|------------------------|------------------------|---------------------------------------|--|--|--|--|
|        | 0                      | 0                      | Less than primary education           |  |  |  |  |
| LOW    | 1                      | 1                      | Primary education                     |  |  |  |  |
|        | 2                      | 2                      | Lower secondary education             |  |  |  |  |
| None   | 0                      | 0                      | Of which: less than primary education |  |  |  |  |
| MEDIUM | 3                      | 3                      | Upper secondary                       |  |  |  |  |
| MEDIOM | 4                      | 4                      | Post-secondary non-tertiary education |  |  |  |  |
|        | 5                      |                        |                                       |  |  |  |  |
| HIGH   | 6                      | 5                      | Short cycle tertiary education        |  |  |  |  |
| пібп   | 7                      |                        | Master's or equivalent level          |  |  |  |  |
|        |                        | 6                      | Doctoral or equivalent level          |  |  |  |  |

#### **INDUSTRY**

Table 5 and Table 11 of the ILMQ use the 'High-level SNA/ISIC aggregation (A\*10)' classification of economic sectors, based on the fourth revision of the International Standard Industrial Classification (ISIC, Rev.4), described in detail in: United Nations Statistics Division (2008) 'International Standard Industrial Classification of All Economic Activities Revision 4' (p.274)

[see (.pdf): <a href="http://unstats.un.org/unsd/demographic/sources/census/2010\_phc/docs/ISIC\_rev4.pdf">http://unstats.un.org/unsd/demographic/sources/census/2010\_phc/docs/ISIC\_rev4.pdf</a>]. It consists of ten categories (1- 10) and one subcategory (2a) to be used, as follows

#### INTERNAL LABOUR MIGRATION CLASSIFICATIONS

| A*10 | ISIC, REV.4<br>SECTIONS | ISIC, REV.4<br>DIVISIONS | DESCRIPTION   |
|------|-------------------------|--------------------------|---|
| 1    | Α                       | 01-03                    | Agriculture, forestry and fishing   |
| 2    | BCD et E                | 05-39                    | Manufacturing, mining and quarrying and other industrial activities                           |
| 2a   | С                       | 10-33                    | Of which: manufacturing   |
| 3    | F                       | 41-43                    | Construction  |
| 4    | GH et I                 |                          | Wholesale and retail trade, transportation & storage, accommodation & food service activities |
| 5    | J                       | 58-63                    | Information and communication   |

| 7    | L                       | 68                       | Real estate activities  |
|      |                         |                          |   |
| 8    | M et N                  | 69-82                    | Professional, scientific, technical, administrative and support service activities            |
| 9    | O, P et Q               | 84-88                    | Public administration and defence, education, human health and social work activities         |
| 10   | R, S, T et U            | 90-99                    | Other service activities  |

#### **OCCUPATION**

Table 6 and Table 12 of the ILMQ use the ILO's latest International Standard Classification of Occupations 2008 (ISCO-08), which replaces the previously used 'ISCO-88'. The technical files and conversions are available online [www.ilo.org/public/english/bureau/stat/isco/isco08/] and the groupings are categorised broadly by their skill-level required (from high to low) and outlined as per the major groups shown below. If you are unable to apply the latest codes, then please use ISCO-88 or ISCO-68 but NOTE CLEARLY that you have used them.

#### INTERNATIONAL STANDARD CLASSIFICATION OF OCCUPATIONS 2008 (ISCO-08)

| ISCO-<br>08 | Major Groups                                     |             |

#### STATUS IN EMPLOYMENT

Table 7 uses the ILO's latest International Classification by Status in Employment 1993 (ICSE-93), as adopted by the 15th International Labour Conference of Statisticians. The full specification is available online [.pdf: www.ilo.org/wcmsp5/groups/public/---dgreports/---stat/documents/normativeinstrument/wcms\_087562.pdf] and the groupings are categorised by Major Group.

# **Annex 3: Tables**

Total population by country, 2008-2014

| COUNTRY                           |             |             |             | YEAR        |             |             |             |
